Year 6	Evolution and Inheritance changes over time offspring adaptation and evolution	Light	Electricity		Living things and their habitats Variation and classification	Animals including humans Circulatory systems Nutrient and water transportation Diet and Drugs

SCIENCE

EYFS

LEARNING AREA (e.g. Understanding the World)

3-4 Year Olds

- Use all their senses in hands-on exploration of natural materials.
- Explore collections of materials with similar and/or different properties.
- Talk about what they see, using a wide vocabulary.
- Explore how things work. • Plant seeds and care for growing plants.
- Understand the key features of the life cycle of a plant and an animal.
- Begin to understand the need to respect and care for the natural environment and all living things.
- Explore and talk about different forces they can feel.
- Talk about the differences between materials and changes they notice.

Children in Reception

- Explore the natural world around them.
- Describe what they see, hear and feel whilst outside.
- Understand the effect of changing seasons on the natural world around them.

Early Learning Goals

- Explore the natural world around them, making observations and drawing pictures of animals and plants.
- Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class.
- Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter.

SCIENCE
YEAR 1
National Curriculum
<p>Working scientifically During years 1 and 2, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:</p> <ul style="list-style-type: none"> ● asking simple questions and recognising that they can be answered in different ways ● observing closely, using simple equipment ● performing simple tests ● identifying and classifying ● using their observations and ideas to suggest answers to questions ● gathering and recording data to help in answering questions <p>Plants – Pupils should be taught to:</p> <ul style="list-style-type: none"> ● identify and name a variety of common wild and garden plants, including deciduous and evergreen trees ● identify and describe the basic structure of a variety of common flowering plants, including trees <p>Animals, including humans Pupils should be taught to:</p> <ul style="list-style-type: none"> ● identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals ● identify and name a variety of common animals that are carnivores, herbivores and omnivores ● describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets) ● identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense <p>Everyday materials Pupils should be taught to:</p>

- distinguish between an object and the material from which it is made
- identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock
- describe the simple physical properties of a variety of everyday materials
- compare and group together a variety of everyday materials on the basis of their simple physical properties

Seasonal changes

Pupils should be taught to:

- observe changes across the 4 seasons
- observe and describe weather associated with the seasons and how day length varies

Key Questions

<ul style="list-style-type: none"> • What are seasons? - Can I name the seasons? • How does the weather change across the seasons? SC1- What can I see as the seasons change? • What is the length of an autumn day? SC1- Can I measure time? • Can you describe the weather in autumn? SC1-What does the weather look like in autumn? Can I carry out a rainwater investigation? • What are the signs of autumn? SC1- How do leaves change? What do the animals do? • How does our clothing change during the winter? • How do some animals adapt in the winter time? - What do the animals do? 	<ul style="list-style-type: none"> • Can I describe materials using their senses? SC1 - Can I name and identify different materials? • Can I describe materials using their senses, using specific scientific words? • Can I explain what material objects are made from? • Can I explain why a material might be useful for a specific job? SC1 - What materials keep us warm? SC1 - What materials make a good house? • Can I name some different materials? 	<ul style="list-style-type: none"> • What does a spring look like? • What does a spring day look like? SC1- Can I measure the time on a spring day? SC1 - How much rain falls in spring? SC1 - What is the temperature in spring? 	<ul style="list-style-type: none"> • Can I classify the different types of animals? SC1 - Can I observe some differences between animals? SC1 - Can I sort pictures of living and non-living things? • Can I describe and compare the structure of animals? Can they classify common animals? (birds, fish, amphibians, reptiles, mammals, invertebrates) -Can I name different body parts of animals? • What is a herbivore, carnivore and an omnivore? SC1 -Can I classify animals by what they eat? (carnivore, herbivore, omnivore) • Can you label and name the different parts of the human body? SC1 Can I name the parts of the human body that I can see? 	<ul style="list-style-type: none"> • Can I name the petals, stem, leaf and root of a plant? • Can I identify and name a range of common plants and trees? -SC1 - Can I name some common wild plants? SC1 -Can I name some garden plants? • Can they recognise deciduous and evergreen trees? SC1 - Can I identify some trees by their leaves? • Can they describe the parts of a plant (roots, stem, leaves, flowers)?
---	---	---	--	--

		<ul style="list-style-type: none"> • Can I sort materials into groups by a given criteria? • Can I explain how solid shapes can be changed by squashing, bending, twisting and stretching? 		<ul style="list-style-type: none"> • Can I name the 5 senses and perform different tests on them? SC1 - Can I identify the main parts of the human body and link them to their senses? 	SC1 - Can I plant a bean and discuss how it has grown.
--	--	--	--	---	--

Scientific Enquiry

	<p>Observing Closely</p> <ul style="list-style-type: none"> • Can I talk about what I <see, touch, smell, hear or taste> during autumn? <p>Recording Findings</p> <ul style="list-style-type: none"> • Can I show my work using pictures, labels and captions? Can I draw an autumn picture? <p>Performing Tests</p> <ul style="list-style-type: none"> • Can I measure rain water? • Can I measure the hours in a day? • Can I measure the temperature in an autumn/winter day? <p>Scientific Equipment</p> <ul style="list-style-type: none"> • Rain catcher 	<p>Observing Closely</p> <ul style="list-style-type: none"> • Can I talk about what I <see, touch, smell, hear or taste>? • Can I use simple equipment to help them make observations? <p>Identifying and Classifying</p> <ul style="list-style-type: none"> • Can I identify and classify things I observe? • Can I think of some questions to ask? • Can I answer some scientific questions? • Can they give a simple reason for their answers? • Can they explain what they have found out? <p>Scientific Equipment</p>	<p>Observing Closely</p> <ul style="list-style-type: none"> • Can I talk about what I <see, touch, smell, hear or taste> during autumn? <p>Recording Findings</p> <ul style="list-style-type: none"> • Can I show my work using pictures, labels and captions? SCIENCE

YEAR 2

National Curriculum

Working scientifically

During years 1 and 2, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- asking simple questions and recognising that they can be answered in different ways
- observing closely, using simple equipment
- performing simple tests
- identifying and classifying
- using their observations and ideas to suggest answers to questions
- gathering and recording data to help in answering questions

Living things and their habitats

Pupils should be taught to:

- explore and compare the differences between things that are living, dead, and things that have never been alive
- identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other
- identify and name a variety of plants and animals in their habitats, including microhabitats
- describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food

Plants

Pupils should be taught to:

- observe and describe how seeds and bulbs grow into mature plants
- find out and describe how plants need water, light and a suitable temperature to grow and stay healthy

Animals, including humans

Pupils should be taught to:

- notice that animals, including humans, have offspring which grow into adults
- find out about and describe the basic needs of animals, including humans, for survival (water, food and air)
- describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene

Uses of everyday materials

Pupils should be taught to:

- identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses
- find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching

AUTUMN		SPRING		SUMMER

SCIENCE

YEAR 3

National Curriculum

Working scientifically

During years 3 and 4, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- asking relevant questions and using different types of scientific enquiries to answer them
- setting up simple practical enquiries, comparative and fair tests
- making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers
- gathering, recording, classifying and presenting data in a variety of ways to help in answering questions
- recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables
- reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions
- using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions
- identifying differences, similarities or changes related to simple scientific ideas and processes
- using straightforward scientific evidence to answer questions or to support their findings.

Plants

Pupils should be taught to:

- identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers
- explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant
- investigate the way in which water is transported within plants
- explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal

Animals, including humans

Pupils should be taught to:

- identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat
- identify that humans and some other animals have skeletons and muscles for support, protection and movement

Rocks

Pupils should be taught to:

- compare and group together different kinds of rocks on the basis of their appearance and simple physical properties
- describe in simple terms how fossils are formed when things that have lived are trapped within rock
- recognise that soils are made from rocks and organic matter

Light

Pupils should be taught to:

- recognise that they need light in order to see things and that dark is the absence of light
- notice that light is reflected from surfaces
- recognise that light from the sun can be dangerous and that there are ways to protect their eyes
- recognise that shadows are formed when the light from a light source is blocked by an opaque object
- find patterns in the way that the size of shadows change

Forces and magnets

- compare how things move on different surfaces
- notice that some forces need contact between 2 objects, but magnetic forces can act at a distance
- observe how magnets attract or repel each other and attract some materials and not others
- compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials
- describe magnets as having 2 poles
- predict whether 2 magnets will attract or repel each other, depending on which poles are facing

SCIENCE

YEAR 4

National Curriculum

Working scientifically

During years 3 and 4, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- asking relevant questions and using different types of scientific enquiries to answer them
- setting up simple practical enquiries, comparative and fair tests
- making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers
- gathering, recording, classifying and presenting data in a variety of ways to help in answering questions
- recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables
- reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions
- using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions
- identifying differences, similarities or changes related to simple scientific ideas and processes
- using straightforward scientific evidence to answer questions or to support their findings.

Living things and their habitats

Pupils should be taught to:

- recognise that living things can be grouped in a variety of ways
- explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment
- recognise that environments can change and that this can sometimes pose dangers to living things

Animals, including humans

Pupils should be taught to:

- describe the simple functions of the basic parts of the digestive system in humans
- identify the different types of teeth in humans and their simple functions
- construct and interpret a variety of food chains, identifying producers, predators and prey

States of matter

Pupils should be taught to:

- compare and group materials together, according to whether they are solids, liquids or gases
- observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C)
- identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature

Sound

Pupils should be taught to:

- identify how sounds are made, associating some of them with something vibrating
- recognise that vibrations from sounds travel through a medium to the ear
- find patterns between the pitch of a sound and features of the object that produced it
- find patterns between the volume of a sound and the strength of the vibrations that produced it

- recognise that sounds get fainter as the distance from the sound source increases

Electricity

Pupils should be taught to:

- identify common appliances that run on electricity
- construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers
- identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery
- recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit
- recognise some common conductors and insulators, and associate metals with being good conductors

YEAR 5
National Curriculum
<p>Working scientifically</p> <p>During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:</p> <ul style="list-style-type: none"> ● planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary ● taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate ● recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs ● using test results to make predictions to set up further comparative and fair tests ● reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as displays and other presentations ● identifying scientific evidence that has been used to support or refute ideas or arguments. <p>Living things and their habitats</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> ● describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird ● describe the life process of reproduction in some plants and animals

Animals, including humans

Pupils should be taught to:

- describe the changes as humans develop to old age

Properties and changes of materials

Pupils should be taught to:

- compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets
- know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution
- use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating
- give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic
- demonstrate that dissolving, mixing and changes of state are reversible changes
- explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda

Earth and space

Pupils should be taught to:

- describe the movement of the Earth and other planets relative to the sun in the solar system
- describe the movement of the moon relative to the Earth
- describe the sun, Earth and moon as approximately spherical bodies
- use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky

Forces

Pupils should be taught to:

- explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object
- identify the effects of air resistance, water resistance and friction, that act between moving surfaces
- recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect

Animals including Humans

Lessons 1-6 - Twinkl Planit Resources

SCIENCE

YEAR 6

National Curriculum

Working scientifically

During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary

- taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate
- recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs
- using test results to make predictions to set up further comparative and fair tests
- reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as displays and other presentations
- identifying scientific evidence that has been used to support or refute ideas or arguments

Living things and their habitats

Pupils should be taught to:

- describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals
- give reasons for classifying plants and animals based on specific characteristics

Animals including humans

Pupils should be taught to:

- identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood
- recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function
- describe the ways in which nutrients and water are transported within animals, including humans

Evolution and inheritance

Pupils should be taught to:

- recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago
- recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents
- identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution

Light

Pupils should be taught to:

- recognise that light appears to travel in straight lines
- use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye
- explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes
- use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them

Electricity

Pupils should be taught to:

- associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit
- compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches
- use recognised symbols when representing a simple circuit in a diagram

Domain: Biology	Domain: Physics	Domain: Physics	Domain:	Domain: Biology	Domain: Biology
Areas of Learning					
<p>Prior Learning:</p> <ul style="list-style-type: none"> Not Applicable <p>Common Misconceptions:</p> <ul style="list-style-type: none"> Environmental changes can be inherited Humans used to be monkeys An individual can evolve during its own life span Evolution produces living things perfectly adapted to their environment Natural selection is an active process Natural selection is always good for the environment Evolution and religion are incompatible Males inherit from their father Females inherit from their mother 	<p>Prior Learning:</p> <ul style="list-style-type: none"> Recognise that they need light in order to see things and that dark is the absence of light. Notice that light is reflected from surfaces. Recognise that light from the sun can be dangerous and that there are ways to protect their eyes. Recognise that shadows are formed when the light from a light source is blocked by a solid object. Find patterns in the way that the sizes of shadows change <p>Common Misconceptions:</p> <ul style="list-style-type: none"> Some children may think that when they look in a mirror the image is formed on the surface of the mirror itself. Eyes give out light Reflective surfaces emit light Only shiny surfaces or water reflect light 	<p>Prior Learning:</p> <ul style="list-style-type: none"> Identify common appliances that run on electricity. Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. Recognise that a switch opens and closes the circuit and associate this with whether or not a lamp lights in a simple series circuit. Recognise some common conductors and insulators, and associate metals with being good conductors. Know the difference between a conductor and an insulator; giving examples of each. Safety when using electricity. <p>Common Misconceptions:</p> <ul style="list-style-type: none"> Electrons flow at the speed of light 	<p>Prior Learning:</p> <ul style="list-style-type: none"> <p>Common Misconceptions:</p> <ul style="list-style-type: none"> 	<p>Prior Learning:</p> <ul style="list-style-type: none"> Some organisms reproduce sexually where offspring inherit information from both parents. Some organisms reproduce asexually by making a copy of a single parent. Environmental change can affect how well an organism is suited to its environment. Different types of organisms have different lifecycles <p>Common Misconceptions:</p> <ul style="list-style-type: none"> All microorganisms are dangerous Organisms can only be classified in one way. 	<p>Prior Learning:</p> <ul style="list-style-type: none"> Know the life cycle of different living things, e.g. Mammal, amphibian, insect bird. Know the differences between different life cycles. Know the process of reproduction in plants. Know the process of reproduction in animals <p>Common Misconceptions:</p> <ul style="list-style-type: none"> Your heart is on the left side of your chest The heart makes blood Blood travels in one loop from your heart to your lungs and around your body When we exercise, our heart beats faster to work the muscles more Some blood in our bodies is blue and some is red Protein is good for you so you can eat as much as you want Food only contains fat if you can see it

		<ul style="list-style-type: none"> • Different coloured wires effect how the circuit works • Wire is made of plastic • If a circuit is broken, energy goes off into the air. • Electricity comes out of both sides of the battery and leads to both sides of a circuit. • Current, vottage and electricity are all the same thing. • Current gets less as it passes through a component • Electricity is an object that can be seen. 			<ul style="list-style-type: none"> • All drugs are bad for you.
